

FeatherLite™...The Original Lightest Flood Source

Don't Settle for Second Best

Our patented ProKem™ Technology that created a unique, radioactive matrix as thin as a sheet of paper, resulted in FeatherLite™ being the thinnest and original lightweight source.

Today that distinction continues. FeatherLite™ is still 20% lighter than any other source, because all other sources embed radioactive material in epoxy – and we guarantee a CV of 0.8% or lower.
